

## CARE INSTRUCTIONS

### ANIMALS “SEE” WITH THEIR NOSE!

But now you can be virtually “invisible” to wild game. The innovative ERGOTARN® scent filter greatly reduces the human scent!

### HOW THE FILTER WORKS

Every article in the OUTFOX® collection featuring ERGOTARN® is fitted with a high-performance filter that adsorbs and reliably traps odorous molecules.

This is done by millions of tiny pure carbon beads laminated onto a durable polyester knitted fabric.

These beads adsorb any form of odour, and they do so in a purely biological way. The advantage of this technology is the filter’s high level of air permeability, ensuring a high level of comfort when wearing the items.

This is better than simply blocking odours with film inlays that naturally lead to reduced air permeability in the fabric.

And in contrast to other scent-reducing materials, there are absolutely no health-related concerns or skin compatibility problems with the ERGOTARN® filter.

### HANDLING INSTRUCTIONS

To make sure that you can enjoy your OUTFOX® collection article for a long time to come and the function of the ERGOTARN® filter is not diminished, we recommend that you handle and care for your article as follows:

- Ensure that your OUTFOX® clothing is not exposed to any unnecessary odours when wearing or during storage.
- As far as possible, only wear the clothing for its intended outdoor purpose.
- Store the clothing in the most odour-neutral way possible, perhaps in a suitable bag or box. Make sure the clothing is completely dry before storage!
- Turning the clothing inside-out provides extra odour protection, since odours then first come into contact with the filter and are neutralised. This protects the clothing’s outer material, which is folded onto the inside.
- When possible, dry the outer material in the fresh air. If this is not possible, then hang it out to dry indoors in the most odour-neutral area available. Dryers can also be used (see the sewn-in Care Instructions label), but are less gentle on the material.

### CARING FOR THE ERGOTARN® FILTER:

PLEASE UNZIP THE ERGOTARN FILTER AND REMOVE IT FROM THE OUTER MATERIAL BEFORE CARING FOR IT!

WASHING (please only wash the filter if it is dirty):  
40° C gentle wash cycle, only fill the washing machine drum to 2/3 of its capacity and ensure that the water level is sufficiently high.

### DETERGENT:

Our recommendation: **OUTFOX WASH** (see below)! ONLY USE MILD DETERGENTS, ideally unscented and containing no whiteners. DO NOT USE FABRIC SOFTENER.

### RINSING:

Rinse twice thoroughly after washing.

### SPINNING:

Medium spinning cycle, approximately 500 rpm.

### CHLORINE:

DO NOT USE ANY CHLORINE BLEACHES!

### IRONING:

Iron at medium temperature (max. 150° C), avoid heavy pressing, do not curl or change shape.

### DRY CLEANING:

Not suitable for dry cleaning!

### DRYING:

Can be dried in dryers at medium temperature.

### REGENERATION:

**After 50-100 days of hunting-related use, we recommend that you run the filter through a drying cycle in a conventional dryer at a medium setting to “offload” the odours trapped within it. (Facemask and Balaklava after 20 days of use) It is not necessary to wash the filter for its regeneration!**
